WHAT IS IT ?

Using our polyurea membrane system, we can easily create a Artificial Pond, a Tank, a Channel, etc. It depends on the imagination and needs of the client. On any kind of land, anywhere, we can create a Pond with great durability.

Once the necessary opening on the ground has been done we do a good compression, we put a screen, and then we project Polyurea up to 3mm thick (with the desired colour), and is done. We can begin to fill with water.

Together with a specialized company in water catchment, we can put next to the Lagoon or Tank, some holes for water catchment, which then can be used in the Lagoon or Tank. If you want to use it as a pool, we can put a system for the cleaning and movement of the waters.

As you see, is fast, economic and with several applications.
