ECOLOGICAL PRODUCTS

WHAT IS AN ECOLOGICAL PRODUCT

- An ecological product is any kind of product which is non-polluting, non-toxic and beneficial to the environment and health, whether it is craft, manufactured or processed, for personal use or for residential, commercial, agricultural and industrial use.
- The use of renewable natural raw materials obtained through a sustainable way or by non-GM biotechnology, as well as the reuse and recycling of synthetic raw materials through clean technological processes (eg: rubber, plastic, cork, ceramic, textile fibers, wood), (without pollutants emissions and without the use of aggressive products such as chlorine) allow the classification of a product as acceptable or advisable according to environmental criteria.
- The ecological product is capable of awakening the eco-social consciousness of the community and educating environmentally those who produce it and those who consume it.
